

## • CRUD ( Tabel Mobil )

The image displays two screenshots of the Postman application, demonstrating API requests for a car rental system.

**Top Screenshot: POST Request**

The request is a POST to `localhost/rental_mobil/public/api/simpan_mobil`. The body is a JSON object with the following data:

KEY	VALUE	DESCRIPTION
<input checked="" type="checkbox"/> nama_mobil	Terios	
<input checked="" type="checkbox"/> id_jenis_mobil	1	
<input checked="" type="checkbox"/> plat_nomor	DK 3242 B	
<input checked="" type="checkbox"/> kondisi	bagus	
<input checked="" type="checkbox"/> harga_sewa_per_hari	800000	
Key	Value	Description

The response status is 200 OK, Time: 333 ms, Size: 387 B. The response body is a JSON object:

```
{  "status": "Sukses menambahkan data!"}
```

**Bottom Screenshot: GET Request**

The request is a GET to `localhost/rental_mobil/public/api/tampil_mobil`. The response status is 200 OK, Time: 333 ms, Size: 387 B. The response body is a JSON array of car rental records:

```
{  "id_mobil": 2,  "nama_mobil": "Avanza",  "id_jenis_mobil": 2,  "plat_nomor": "N 5261 J",  "kondisi": "bagus",  "harga_sewa_per_hari": 500000},  {  "id_mobil": 3,  "nama_mobil": "Rush",  "id_jenis_mobil": 2,  "plat_nomor": "B 1234 J",  "kondisi": "bagus",  "harga_sewa_per_hari": 800000},  {  "id_mobil": 4,  "nama_mobil": "Terios",  "id_jenis_mobil": 1,  "plat_nomor": "DK 3242 B",  "kondisi": "bagus",  "harga_sewa_per_hari": 800000}
```

## • CRUD ( Tabel Jenis Mobil )

The image displays two screenshots of the Postman application, illustrating the CRUD operations for a car rental system.

**Top Screenshot: POST Request**

The top screenshot shows a POST request to the endpoint `localhost/rental_mobil/public/api/simpan_jenis`. The request is configured with the following parameters:

- Method:** POST
- URL:** `localhost/rental_mobil/public/api/simpan_jenis`
- Body:** The request body is a JSON object with the following fields:
  - `nama_penyewa`: malfynas
  - `alamat`: malang
  - `telp`: 123321
  - `no_ktp`: 09123
  - `jenis_mobil`: Manual

The response status is 200 OK, with a time of 303 ms and a size of 357 B. The response body is a JSON object: `{ "status": "Sukses menambahkan data!" }`.

**Bottom Screenshot: GET Request**

The bottom screenshot shows a GET request to the endpoint `localhost/rental_mobil/public/api/tampil_jenis`. The request is configured with the following parameters:

- Method:** GET
- URL:** `localhost/rental_mobil/public/api/tampil_jenis`
- Headers:** The request includes an Authorization header with the value `bearer eyJ0eXkiOiJRV1QlCjhbGdOjUz1Nj9.ejpc3MiOiJ...`.

The response status is 200 OK, with a time of 157 ms and a size of 438 B. The response body is a JSON array of car types:

```

1  {
2    "id_jenis_mobil": 1,
3    "jenis_mobil": "Matic"
4  },
5  {
6    "id_jenis_mobil": 2,
7    "jenis_mobil": "Manual"
8  }
9  ]
10

```

## • CRUD ( Tabel Penyewa )

The image displays two screenshots of the Postman API client interface, demonstrating a CRUD operation on a 'Penyewa' (Tenant) table.

**Top Screenshot: POST Request**

- Request:** A POST request to the endpoint `localhost/rental_mobil/public/api/simpan_penyewa`.
- Body:** The request body is in `form-data` format, containing the following fields:

KEY	VALUE	DESCRIPTION
<input checked="" type="checkbox"/> nama_penyewa	putra	
<input checked="" type="checkbox"/> alamat	malang	
<input checked="" type="checkbox"/> telp	123321	
<input checked="" type="checkbox"/> no_ktp	09123	
<input type="checkbox"/> jenis_mobil	Manual	
- Response:** The response status is `200 OK`. The response body (Pretty view) shows:

```
1 {
2   "status": "Sukses menambahkan data!"
3 }
```

**Bottom Screenshot: GET Request**

- Request:** A GET request to the endpoint `localhost/rental_mobil/public/api/tampil_penyewa`.
- Response:** The response status is `200 OK`. The response body (Pretty view) shows a JSON array of three tenants:

```
1 [
2   {
3     "id_penyewa": 3,
4     "nama_penyewa": "fynas",
5     "telp": 123321,
6     "no_ktp": "09123",
7     "alamat": "malang"
8   },
9   {
10    "id_penyewa": 4,
11    "nama_penyewa": "malfynas",
12    "telp": 123321,
13    "no_ktp": "09123",
14    "alamat": "malang"
15  },
16  {
17    "id_penyewa": 5,
18    "nama_penyewa": "putra",
19    "telp": 123321,
20    "no_ktp": "09123",
21    "alamat": "malang"
22  }
23 ]
```

- **Script JenisMobilController.php**

The image displays two screenshots of a Visual Studio Code editor window, showing the code for the `JenisMobilController.php` file. The editor is open to the `Controllers` directory, and the file `JenisMobilController.php` is selected in the Explorer pane.

**Top Screenshot:** The code shows the `update` method. It checks if the user is an admin and if the `jenis_mobil` field is required. If the update is successful, it returns a success message; otherwise, it returns an error message.

```
        }else{
            $status="Gagal menambahkan data!";
        }
        return response()->json(compact('status'));
    }
}

public function update($id,Request $req)
{
    if(Auth::User()->level=="admin"){
        $validator=Validator::make($req->all(),
        [
            'jenis_mobil'=>'required'
        ]);
        if($validator->fails()){
            return Response()->json($validator->errors());
        }
        $ubah=JenisMobil_model::where('id_jenis_mobil', $id)->update([
            'jenis_mobil'=>$req->jenis_mobil
        ]);
        if($ubah){
            return Response()->json(['status'=>'Data berhasil diubah!']);
        }else{
            return Response()->json(['status'=>'Data gagal diubah!']);
        }
    }else{
        return response()->json(['status'=>'anda bukan admin!']);
    }
}
```

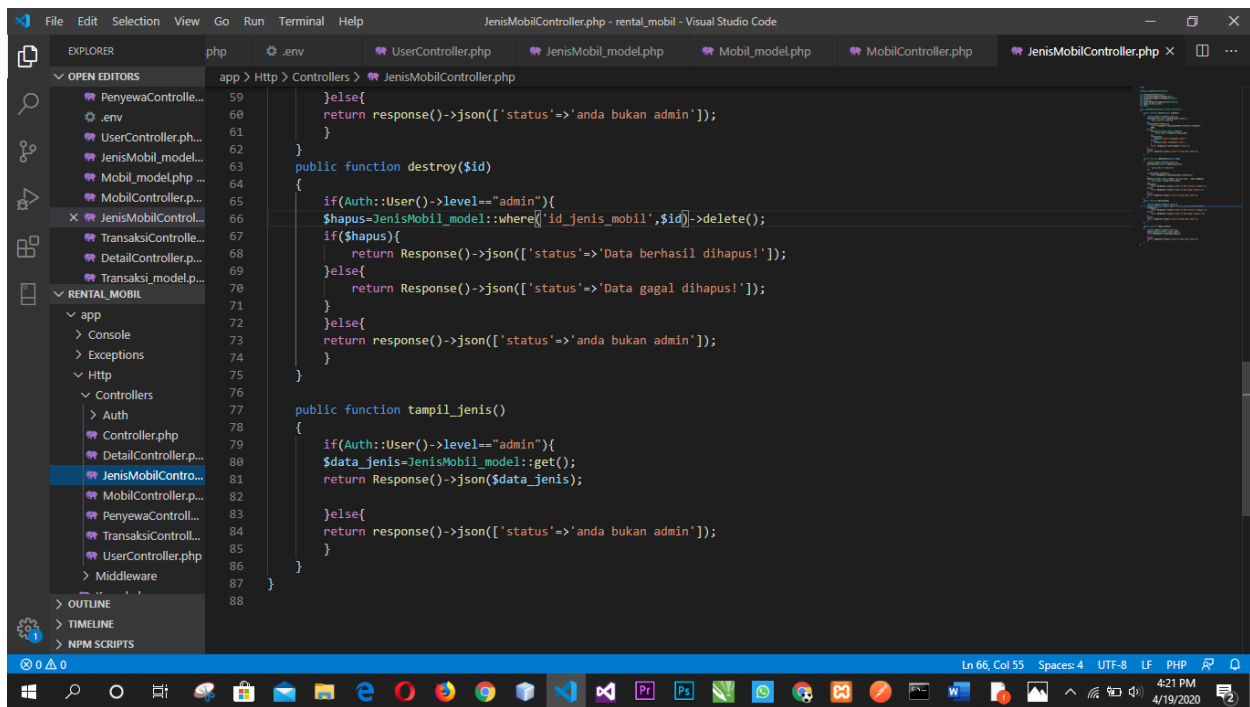

**Bottom Screenshot:** The code shows the `store` method. It checks if the user is an admin and if the `jenis_mobil` field is required. If the store is successful, it returns a success message; otherwise, it returns an error message.

```

- **Script JenisMobil\_model.php**

The screenshot shows the Visual Studio Code interface. The Explorer sidebar on the left displays a project structure with folders like 'app' and 'RENTAL\_MOBIL'. The file 'JenisMobil\_model.php' is selected and highlighted. The main editor window shows the code for this file, which is a PHP class extending 'Model' from the 'Illuminate\Database\Eloquent' namespace. The code includes attributes for the table name, primary key, timestamps, and a fillable array.

```
1 <?php
2
3 namespace App;
4
5 use Illuminate\Database\Eloquent\Model;
6
7 class JenisMobil_model extends Model
8 {
9     protected $table="jenis_mobil";
10    protected $primaryKey="id_jenis_mobil";
11    public $timestamps=false;
12    protected $fillable = [
13        'jenis_mobil',
14    ];
15 }
16
```

- **Script Mobil\_model.php**

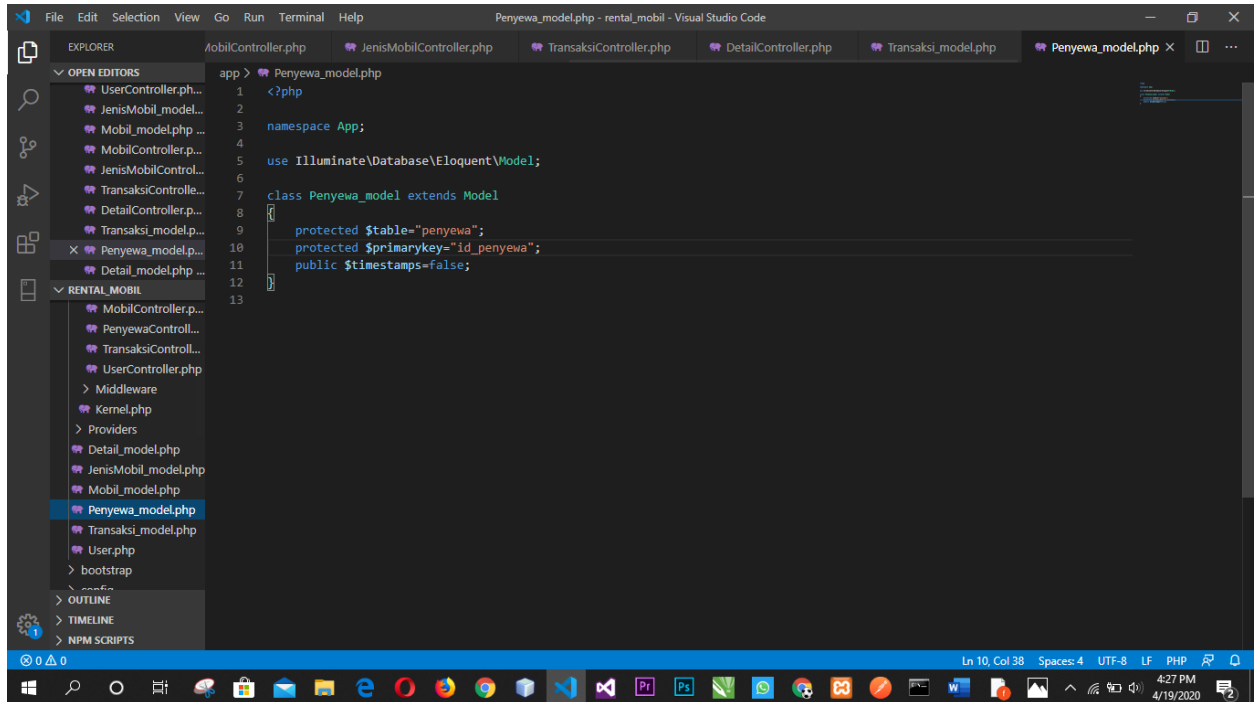

The screenshot shows the Visual Studio Code interface. The Explorer sidebar on the left displays the same project structure. The file 'Mobil\_model.php' is now selected and highlighted. The main editor window shows the code for this file, which is a PHP class extending 'Model' from the 'Illuminate\Database\Eloquent' namespace. The code includes attributes for the table name, primary key, timestamps, and a fillable array.

```
1 <?php
2
3 namespace App;
4
5 use Illuminate\Database\Eloquent\Model;
6
7 class Mobil_model extends Model
8 {
9     protected $table="mobil";
10    protected $primaryKey="id_mobil";
11    public $timestamps=false;
12 }
13
```

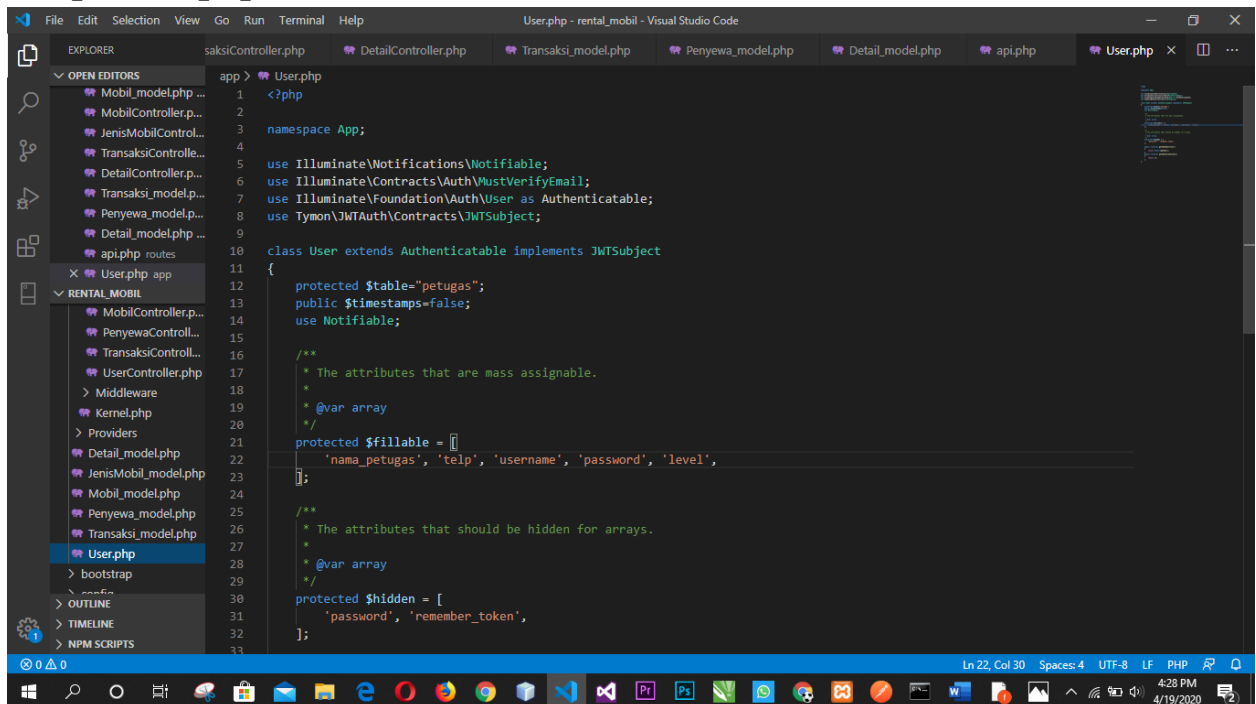

- **Script Penyewa\_model.php**

```
1 <?php
2
3 namespace App;
4
5 use Illuminate\Database\Eloquent\Model;
6
7 class Penyewa_model extends Model
8 {
9     protected $table="penyewa";
10    protected $primaryKey="id_penyewa";
11    public $timestamps=false;
12 }
13
```

- **Script User.php**
